wpSEO Options

Edit page titles

☒ Activate formatting of the title

Format	Home	Title Separator Blogname	▼
	Post	Title Separator Keywords Separator Blogname	▼
	Page	Title Separator Blogname	▼
	Category	Title Separator Blogname	▼
	Search	Title Separator Blogname	▼
	Archives	Title Separator Blogname	▼
	Tag	Tag Separator Blogname	▼
	Error	Title Separator Blogname	▼

Wildcards will be replaced in the selected order [?]

Separator

-

Special signs can be entered as HTML. Example: « becomes < [?]

Label

Home	
Post	
Page	
Category	
Search	
Archives	
Tag	
Error	

Only used if "Format" contains "Label" [?]

Home title

By the output of the title it overwrites all previous defined values [?]

Page number

☒ Activate page numeration

Only displayed if archives, categories or search generate more than one page [?]

Author of a post

☐ Show author of current post

Only displayed if posts or static pages are called and "Format" contains "Title" [?]

Clean up title

☐ Remove HTML tags from title

With HTML tags formatted post titles will be displayed validated [?]

Add title manually ☒ Enter the value directly while writing the post or page in the meta box "wpSEO Options"

Assigned values manually switch the automatic generation off [?]

Save Changes

Edit meta description

☒ Activate formatting of the meta description

Default

ComMetrics benchmark tools for winners - from simple to refined

Only used if "Default" selected in the "Dynamic value" [\[?\]](#)

Dynamic value

Home

Default

Post

Excerpt of the current post

Page

Excerpt of the current post

Category

Category description

Search

Titles of all listed posts

Archives

Titles of all listed posts

Tag

Titles of all listed posts

Error

Default

Description is dynamically created from the selected value [\[?\]](#)

Number of words

40

Maximum word count before description is truncated [\[?\]](#)

Complete Sentences

☐ Under consideration of the number of words, display until next ending of sentence
Dot, question- and exclamation mark indicates the ending of a sentence [\[?\]](#)

Add description manually

☒ Enter the value directly while writing the post or page in the meta box "wpSEO Options"
Assigned values manually switch the automatic generation off [\[?\]](#)

Save Changes

Edit meta keywords

☒ Activate formatting of the meta keywords

Default

social media analytics, social media monitoring, baseline measurement, best n
Only used if "Default" selected in the "Dynamic value"

Dynamic value

Home	Excerpt of the first post
Post	Excerpt of the current post
Page	Excerpt of the current post
Category	Tags of all listed posts
Search	Tags of all listed posts
Archives	Titles of all listed posts
Tag	Titles of all listed posts
Error	Default

Keywords are dynamically created from the selected value

Number of words

8
Maximum word count before description is truncated [?]

Short words

4
Words with a few characters will be filtered from the dynamic value

Blacklist

for For by By and And or Or on On
These keywords will be ignored. Value is case-sensitive and separated by a space [?]

Completion

☒ Activate automatic completion
If the keywords tag consists of less words than allowed, "Default" entries will be used

Nouns

☒ Use only nouns as keywords
Only single nouns will be used as keywords

Relevance

☒ Activate relevance for keywords
Keywords in post or title will be counted, the most frequent ones will be positioned first

Manual tagging

☒ Detect manually tagged keywords in a post
With [wpseo]...[/wpseo] tagged words will be interpreted as most relevant keywords [?]

HTML highlighting

☒ Words between HTML tags will be interpreted as most relevant keywords
Detects the following XHTML tags: ..., ... [?]

Add keywords manually

☒ Enter the value directly while writing the post or page in the meta box "wpSEO Options"
